在 XC8 下，有關 Configuration Bits 的定義已經不像 C18 是在 P16fxxx.H 檔裡宣告。XC8 有專屬的 Config. Bits 的宣告檔案如下：

PIC16F 系列相關的定義在：

C:\Program Files\Microchip\xc8v1.2docs pic_chipinfo.html

PIC18F 系列相關的定義在：

C:\Program Files\Microchip\xc8v1.12docs pic18_chipinfo.html

先開啟 "pic_chipinfo.html" 檔後，再點選貼圖中所顯示的元件，就可以看到底下的 Configuration Bits 的使用說明。

```
[code]10F220 Support Information
```

```
#pragma config Usage
```

```
#pragma config <setting>=<named value>
```

```
For example:
```

```
// Internal Oscillator Frequency Select bit: 8 MHz
```

```
// Master Clear Pull-up Enable bit: Pull-up disabled
```

```
// Watchdog Timer Enable bit: WDT enabled
```

```
// Code protection bit: Code protection off
```

```
// GP3/MCLR Pin Function Select bit: GP3/MCLR pin function is MCLR
```

```
#pragma config IOSCFS = 8MHZ, MCPUR = OFF, WDTE = ON, CP = OFF, MCLRE = ON
```

```
#pragma config <setting>=<literal constant>
```

```
For example:
```

```
// Internal Oscillator Frequency Select bit: 8 MHz
```

```
// Master Clear Pull-up Enable bit: Pull-up disabled
```

```
// Watchdog Timer Enable bit: WDT enabled
```

```
// Code protection bit: Code protection off
```

```
// GP3/MCLR Pin Function Select bit: GP3/MCLR pin function is MCLR
```

```
#pragma config IOSCFS = 0x1, MCPUR = 0x1, WDTE = 0x1, CP = 0x1, MCLRE = 0x1
```

```
#pragma config <register>=<literal constant> .....
```

```
..... {/code]
```

附加檔案：
