楊老師, 版主大家好!

我的使用環境如下;

1. Win10, MPLABX4.0.5, XC81.4.5, Harmony2.0.5, MPLAB8.92, C183.47, MCP6V01 + Curiosity PIC32MZ2048EFM100 + ADM00667

2. 因為測溫範圍在600度以內, 量220V電壓電流, 所以要整合約 5組 MCP6V01 + 兩組ADM00667 請問有更好的建議嗎?

3. 參照C18移植XC8資料, 所以先做 MCP6V01 Demo Code的轉移時, 用 MPLAB 8.92 Compiler, Link, LIB都設定使用 XC8 bin次目錄下, 但始終有釵h#include Error如下, 請問我的錯誤是?

```
Clean: Deleting intermediary and output files.
Clean: Deleted file "C:WorkMCP6V01TCdemoautofilesmain.o".
Clean: Deleted file "C:microchipappsMCP6V01_FirmwareMCP6V01ThermocoupleDemo.mcs".
Clean: Done.
Executing: "C:Program Files (x86)Microchipxc8v1.45binmcc18.exe" -p=18F2550
/i"C:WorkMCP6V01TCdemo" "main.c" -fo="C:WorkMCP6V01TCdemoautofilesmain.o" -Ou- -Ot- -Ob-
-Op- -Or- -Od- -Opa-
Executing: "C:Program Files (x86)Microchipxc8v1.45binmcc18.exe" -p=18F2550
/i"C:WorkMCP6V01TCdemo" "usbmap.c" -fo="C:WorkMCP6V01TCdemoautofilesusbmap.o" -Ou- -Ot-
-Ob- -Op- -Or- -Od- -Opa-
usbmap.c:
    38: #include "systemtypedefs.h"
           ^ (141) can't open include file "systemtypedefs.h": No such
file or directory
(908) exit status = 1
(908) exit status = 1
Halting build on first failure as requested.
```

4. 我已試完Curiosity PIC32MZ EF板的

C:microchipharmonyv2\_05appsusbmsd\_basic

及

C:microchipharmonyv2\_05appstcpipwifi\_rgb\_easy\_configuration

兩個Harmony範例, 請問有PIC32 Harmony 或 MCC與PC WIFI之間的控制及資料傳輸範例嗎? 多謝您們指點!!
