請問MATHACC弁鋁抗恂摧獐 俄茂婷燊野X來使用呢?

```
MATHACCResult MATHACC_ResultGet(void)
```

```
{  
    MATHACCResult data;  
  
    data.byteLL = PID10UTLL;  
    data.byteLH = PID10UTLH;  
    data.byteHL = PID10UTHL;  
    data.byteHH = PID10UTHH;  
    data.byteU = PID10UTU;  
  
    return data;  
}
```

我寫

```
unsigned long int PI_Value;
```

```
PI_Value = MATHACC_ResultGet() ;
```

這樣會跳出錯誤

```
main.c:112: error: (182) illegal conversion between types  
struct S1097 -> unsigned long  
main.c:112: error: (181) non-scalar types can't be converted to other types  
(908) exit status = 1
```

```
BUILD FAILED (exit value 2, total time: 6s)
```
