aaron_0201 寫道:

p18f25k22 XIDE 3.5

RC0 控制mos開關(耗電流約18mA)

```
PORTC=0;
```

```
ANSEL=0;
```

```
TRISC=0;
```

```
while(1)
```

```
{
```

```
  if(flag300ms)//定時器開啟
```

```
{  LATCbits.LATC1=!LATCbits.LATC1;delay1ms();
```

```
  LATCbits.LATC0=!LATCbits.LATC0;delay1ms();
```

```
  LATCbits.LATC2=!LATCbits.LATC2;delay1ms();
```

```
}
```

```
}-->LATCbits.LATC0沒有反應 c1 c2中間有1ms
```

```
while(1)
```

```
{
```

```
  LATCbits.LATC1=!LATCbits.LATC1;delay1ms();
```

```
  LATCbits.LATC0=!LATCbits.LATC0;delay1ms();
```

```
  LATCbits.LATC2=!LATCbits.LATC2;delay1ms();
```

```
}-->LATCbits.LATC0 有反應
```

請問還有哪邊要注意設定

附註 我是用timer1
